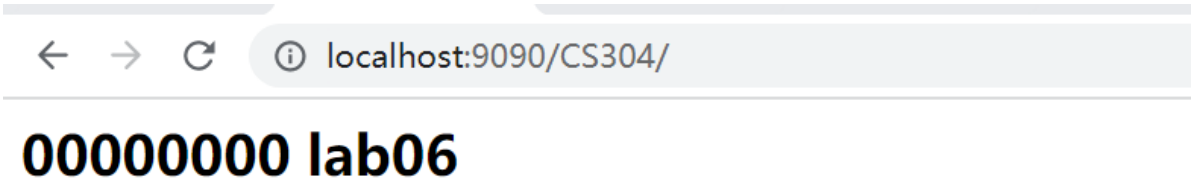
Practice 6

> This practice should be checked **onsite during labs**. You could check the practice on week 6 or week 7 lab sessions. Submissions after Apr. 3 will be considered as late submission.

Create and run a javaweb project using Jetty and Tomcat

1. Create a javaweb project using `maven-archetype-webapp` using command line or IDEA.

2. Change "hello world" to "Your student ID + name".

3. Add `Jetty` , configure its port to 9090 and context path to "CS304". Start jetty server and show us the web page as below.


4. Add `Tomcat` , configure its port to 8899 and context path to "CS304". Start Tomcat server and show us the web page as below.
